RELIABLE TECHNOLOGY

**SIMULATORS ARE CONTINUALLY UPDATED WITH THE LATEST
ELECTRONIC DEVELOPMENTS & FREE SOFTWARE UPGRADES**

Sports Coach Simulator customers are regularly impressed with the fact that their systems which were purchased many years ago can still be updated with the very latest technology. Clients who originally installed the sensor mat and putting mat systems over 20 years ago can affordably replace them with the latest USB3 super-speed cameras – the world's most accurate indoor technology. Switching over from halogen lighting to energy-saving low voltage infrared lighting further enhances on-screen image quality. Simulator booths installed some 20 years ago are proving to be so reliable that they are expected to survive another 20+ years. Although the GPS golf simulator is still available, most clients have decided to add the very latest engines on new computers supplied by Sports Coach. Available engines include GSX, E6, Sports Simulator, Racing Simulator, Flight Simulator and Shooting simulator, allowing clients to enjoy thousands of environments including golf courses, stadiums, arenas, racing circuits and airports from around the world. Customers looking for an affordable way to add courses to their GPS simulator can benefit from upgrading to the Sports Simulator, which includes all 200 GPS courses and over 40 additional sports which ensures that these reliable simulators even though they were purchased many years ago, are brought up to date with refreshing entertainment all year round on the worlds most accurate simulator. Sports Coach Simulator is recognised as the market leader by manufacturing, reliable simulators for the last 28 years. www.sportssimulator.com
