

PERSONALISE YOUR SIMULATOR EXPERIENCE TO THE FULLEST: INTRODUCING THE LIVE CAMERA FEATURE IN SESSION PLAY

The Live Camera Feature in Session Play on the Sports Simulator is an innovative enhancement that elevates personalisation in interactive sports simulation, making your simulator experience more immersive and engaging. This feature allows players to capture real-time photos of themselves, creating personalised avatars that truly represent their identity. Positioned above the touchscreen monitor, the Live Camera is equipped with a halo light, providing flattering illumination, ideal for the dim environments of simulator bays, where image projection quality is prioritised. The Live Camera ensures every photo is well-lit and clear, enabling players to create avatars they're proud of. A key feature of the Live Camera is its adjustability, accommodating visitors of all heights. Whether you're tall or short, the camera can be easily aligned to your height, ensuring everyone can take a perfectly centred, well-lit photo. This thoughtful design guarantees every player can capture their best self for their in-game avatar. Using the Live Camera is simple—just select the camera button, pose, and snap your photo. The system automatically updates your avatar, allowing you to jump straight into the game. By adding this personal touch, the Live Camera enhances the overall simulator experience, making Session Play more versatile and attractive for venues like sports academies and entertainment centres. Whether competing against friends or exploring new sports challenges, the Live Camera ensures your avatar is a true reflection of yourself. [Click to View the Sports Simulator Blog.](#)
