

UPGRADE TO THE NEXT GENERATION IN FAMILY ENTERTAINMENT FROM VIRTUAL REALITY TO SPORTS SIMULATION

Commercial Virtual Reality has now been superseded by Residential VR, as all the leading gaming consoles now offer headsets connected to infrared detectors at very little cost. The public has already stopped paying high costs to go to entertainment centres to play Augmented Reality Games, which are now available at home on their existing consoles for a fraction of the cost. All the leading consoles such as Sony Playstation and Xbox can be played with wireless Virtual Reality headsets and infrared motion-sensing controllers. Several companies offer equipment such as Meta Quest Pro, Valve Index VR, HTC Vive Pro, Samsung Gear VR, HoloLens and HP Reverb. During 2023 many other rivals are entering the market driving retail costs down even further. Why pay for VR at a Center when for the cost of two visits you can own a VR Setup and play with your family and friends at home? Family Entertainment Centres are needing to quickly convert redundant space to stay ahead of the game, otherwise several areas will no longer be generating a decent income. A physically interactive Sports Simulator ensures customers will continue to visit and spend on entertainment, food and drink. Currently, the most popular sports games are Football, Golf, Baseball, Tennis, Gridiron, Bowling and Cricket. These are all playable on the sports simulator with real sports objects alongside 53 other sports and 1,500 game challenges on 3,500 sporting venues. Swinging one's arms and legs is easy in the lounge and the bedroom; but kicking a football, throwing a ball or hitting a ball is not possible without damaging the home, hence the need for Sports Simulators. Not only are Sports Simulators very addictive to play, but they also will never become outdated unlike VR and AR technology. Click to review on the Sports Simulator Blog.
