

COACHING TAKEN TO NEXT LEVEL AS PLAYER PERFORMANCE IS NOW DATABASED, ALONGSIDE FLIGHT & VIDEO ANALYSIS

All major ball sports now have the ability to compare every player's analysed performance, for all training game challenges. Coaches can database all players whether in the first team, second team, academy or junior squads, to work on training sessions within their own virtual sporting stadium. Managers will quickly know which players are currently delivering the best performance from specific in-game challenges, ensuring that their own team's performance on match day is at the optimum, giving the club even better results. By databasing every player, their current and past performances are directly compared either with their own or with other players, for that specific in-game challenge. Incredible coaching when used in conjunction with the comprehensive Flight Analysis and Digital Video from the side, above or behind positions. Schools, colleges and academies have requested the ability to compare students of varying abilities, so that a class of 30 can be separated into 3 sectors; 10 best players, 10 medium performing students and 10 less active students. By separating the students into 3 groups and by each group playing 5 different sports, all students will be far more interested in playing various sports. Students then become far more active, using 50 different sports, 1,000 challenges and 3,000 venues. Player comparison ensures that every student becomes healthier and far more interested in playing sports whilst improving and perfecting their abilities.
